HICKS-NVRSERIES
WESTEVRYLLINY

HIS list is arranged for the use of landscape architects, landscape gardeners, nurserymen, florists, gardeners, park superintendents and others who wish an accurate list of varieties, with sizes and quantity now on hand at the Hicks Nurseries, Westbury, L. I.

"Home Landscapes" tells you how to get the most beauty and fruit from your country place. Did you receive a copy?

#### COME AFTER BUSINESS HOURS

Order ahead and your trees will be ready on the office steps.

### **BUSINESS TERMS**

PRICES.—The prices in this list are for trees and plants dug and loaded at our nurseries. We charge for delivery, or packing in boxes, bales or crates for shipment. This saves you money, and is the most equable, because our trees are bigger and heavier than usual nursery stock. We can pack or deliver three large trees, twenty years old, for about the same cost as one. Cartage to the railroad is free.

On request we shall be pleased to estimate the cost of delivery and planting.

Five, 50 and 500 plants sold at 10, 100 and 1000 rates, respectively.

TERMS OF PAYMENT—Net cash.

GUARANTEE—NO RISK TO YOU.—We guarantee every plant from our nursery, and give new ones for those that do not grow satisfactorily. The cost of planting and transportation of replaced trees is borne by the purchaser.

PLANTING AND CARE.—This guarantee holds even if your men plant. It is better that they prepare the ground (send for sizes of holes), plant, mulch, or cultivate and water. Summer watering is the most important. You can keep the plants a week or two by firmly covering the roots with moist earth immediately after delivery.

### SUMMER PLANTING

Nearly all kinds of trees can be taken up with balls of earth by the canvases and platforms which we invented. You do not have to wait a year. If you want a shade tree 28 ft high, 18 ft. broad, you can have it any time during the Summer. It is guaranteed to grow satisfactorily, or replaced with another tree. The risk is ours, the fun is yours.

### FRONT COVER ILLUSTRATION

Would you like to reproduce this on your grounds? It consists of I White Birch 10 ft, I Red Flowering Dogwood 6 ft., I Cedar 8 ft., I Cedar 6 ft., 10 Rhododendron, 15 in., 5 Ferns. Packed for shipment \$29.00, or you can send for, or have us deliver at cost.

# DECIDUOUS TREES

### Shade Trees · Flowering Trees · Lawn Trees

ACER. See Maple.

ÆSCULUS. See Horse-Chestnut.

APPLE, Flowering. Pyrus. Malus.

You can have all the pleasures of the Apple and Cherry blossoms intensified by collections of dwarf flowering fruits. To this is added some of the pleasures of the Rose garden for the double varieties of Peach, Cherry and Plum have taken on some of the charm and fragrance of the Roses. They all belong to the Rose family. You can make up a collection from this list, or come when the plants are in bloom in coll. Were replact them in band and take thom home with you. Better try the three early May, or select them in bud and take them home with you. Better try the three ways and then come next year and see what new varieties are available.

BEECH, American. Fagus ferruginea.

One landscape architect said, "I did not know that such fine beeches were available." Another said when he saw them "Some day I am going to make a Beech grove."

These are grown and handled in a new way for Beeches, the same as we handle big Pines and Firs. They are transplanted when 6 or 8 ft. high with a large ball of earth and put 10 ft. apart. When you buy them 10 or 16 ft. high they are dug with big balls of earth held with canvas and platform. This ball of earth contains numer-

ous small, feeding roots as a result of previous transplanting.

Low-branched specimens are particularly valuable for lawn boundaries, for they are branched to the ground, and holding their russet brown leaves all Winter make a screen nearly equal to the evergreens. Some have been trained up with straight

trunks and may be planted for the beauty of their silvery gray bark.

Here is a case where a flat, monotonous piece of ground has been converted into a landscape that nowhere lacks interest. Trees, shrubs, and evergreens have created a series of inclosures like the one illustrated. From the house you are led through an evergreen garden, bristling with interest Winter and Summer. Your walk now disappears into a quiet, cool, shady grove where you would be glad to linger but for that mysterious beyond. Proceeding, you suddenly emerge into this commodious outdoor room, perfectly sectuded on all sides and still immediately adjacent to the other departments. Here there is excreation for mind and body. May we help you inject interest into an unenjoyable landscape?

Deliver to your place

Small-leaved Linden around entrance court. They were broad, low-branched specimens when we sold them

LINDEN, Small-Leaved European. Tilia cordata or T. ulmijolia.

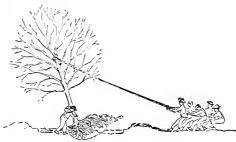

The European Linden is the favorite tree for street, park and formal planting. We have found the small leaved European Linden keeps excellent foliage and possesses the most beautiful outline as shown in the accompanying photograph of trees planted from our nursery at Hewlett Bay Park a few years ago.

The owner has planted 10 big trees on his own lawn and several more around houses he has built to sell. Sixteen of his neighbors have planted shade trees that saved them 10 to 20 years and they are all enthusiastic over their investment. These large trees have lifted the town of Plandome out of the commonplace—a lot of box-like houses on bare ground. They have helped to make it immediately attractive. If 16 out of 50 owners in this town have planted large trees, you may conclude that it is the right thing to do.

#### MAPLE, Norway. Acer platanoides.

Good Norway Maples have been a specialty through the past 50 years. They like the soil and climate. One experienced tree buyer said "The finest lot I have seen. How do you get them so straight?" We have trained them to a single leader and the trees which are not straight are cut out. The tops are round and symmetrical with the lower branches the right height for street trees as required by the shade tree commissions. The roots are just right. We dig them just right. The trees not only grow, but grow vigorously. These are grown to make Long Island beautiful, and real estate subdivisions can do nothing better than plant some of its streets with these fine trees and snend 25 cents a year mulching them with grass, and dig it in each these fine trees and spend 25 cents a year mulching them with grass, and dig it in each year. It will do more than any other investment to lift the property out of the common place and help sell the lots.

Village improvement societies and others cannot do better than consider these trees. We will be glad to look over the neighborhood and suggest trees to fit the various soils. Norway Maples are a good all around tree, keeping good foliage, every year coming out early and holding late. They will thrive where the Elms do not, but soils where Elms do thrive you had best consider them for the sake of variety and greater beauty. On similar soils you can consider Swamp White Oak which will economically give the effect of the noblest American tree, White Oak. On higher soils you can consider the Red Oak. On gravelly subso I the Black Oak.

## OAKS

for

DRY STERILE SOIL Where Shrubbery wilts in Summer

BARE GRAVELLY HILLSIDES

Too poor for weeds

**SEASHORE** 

Among the beach grass with small Pines

OPEN WOODLAND Where Chestnuts have died

Most Permanent PLANT OAKS Most Economical

There is character in a grove of Oak. While you are beautifying, why not have the greatest beauty possible?

It is a planting of this nature that will be a satisfaction to you, and most admired by your friends.

#### OAK, Black. Quercus velutina, or Q. coccinea var. tinctoria.

You have enjoyed the Long Island forests and landscapes of fields and scattered Did you ever stop to analyze the elements of the landscape? Were not Oaks predominant? Nature allows to persist the trees which are most accurately fitted to the conditions. Only the trees which fit can be happy and beautiful. If you would plant the most beautiful landscape, you must use Oaks. Black Oak constitutes the greater part of Long Island forest.

HOW TO PLANT EVERGREENS. DELIVERED WITH BALL AND BURLAP

Carefully untie the burlap, or cut the cords if it is sewed. Place in the hole without disturbing the roots.

Water thoroughly to give them a good start

A graphic sketch of how our evergreens are serving those who are getting the most enjoyment from their country or suburban homes. You can have absolute seclusion and highest beauty without waiting for trees to grow.

We have done the waiting for you

KEY TO PLAN.—(1) Screen to adjoining properties. (2) Screen excluding a noisy, dusty street. (3) Background and inclosure for your flower-garden. (4) Screen to laundry-yard, garage, or other objects

#### FIR, Concolor, or White. Abies concolor.

A beautiful tree with silvery gray foliage less pronounced than the Colorado Blue Spruce. Broad, dignified, solid tree that is sure to keep in good condition hot, Summers or cold Winters. Grown very carefully, root-pruned and moved with big balls of earth. You are sure to realize that they are the aristocrats of your place. As they grow you will realize you have one of the rarest and also the best trees.

Nikko. Abies homolepis, or A. brachyphylla.

At the old Parsons Nursery we discovered this tree liked this climate, making a tall, handsome, dark tree. In fact, one of the best of the pointed top, dark, evergreens. Never gets Winter-killed and appears to like our hot Summers. It should thrive here because its native land is in Asia and it is accustomed to a colder Winter and hotter Summer than here, and the evergreens from that region, strange to say, are more hardy than those native to Long Island. This statement covers Japanese Yew, Japanese Black Pine, Korean Pine and Japanese Hemlock.

#### Nordmann's. Abies Nordmanniana.

Our Nordmann's Fir are particularly valuable because grown wide apart and we frequently transplant with big balls of earth. If they do not get this treatment, the roots are like a long carrot and they are not beautiful after moved to your grounds, or they fail. Some of the broad specimens give the effect of old dwarf Boxwood. If you wish a rich group of evergreens, be sure to consider them.

| 4 ft. high. | 20   | 4.00 | 37.50 |

We have a few firs, which we have classed as irregular trees. They have the same good roots and big balls of earth, but are not the perfect turning-lathe specimens some insist upon. Perhaps the lower branch has been broken by the plough. They are not crowded left-over plants with tap roots like a carrot. These we offer at one-third off. Come and see them.

| HEMLOCK, American. Tsuga canadensis.   |  |  |  |   |
|--|--|--|--|---|

### Pines

Pines are a strong feature at the Hicks Nurseries. White Pines the strongest of all. The reason is not that they are easy to propagate, but that they are the right thing. They are right for the sandy soil of Long Island. They are right for the climate in the northeastern states. We believed we could perform the greatest human service by growing Pines and Oaks, instead of Arborvitæs, Norway Spruce, Golden Retinospora and Carolina Poplars.

The quality is right. They will be delivered to you right. They are guaranteed to grow satisfactorily. There is little or no disappointment because of this preliminary training. They are economical for you to buy because you get more cubic yards of good all year foliage than in any other tree.

#### PINE, Austrian. Pinus Laricio var. austriaca.

This species stands up against the salt spray or against Winter rains and snows, and always looks the same, bright and cheerful. Our plants are especially well grown, recently transplanted and root-pruned. This species has such long coarse roots that it is necessary to spend more in growing and digging with a larger ball of earth than some other evergreens.

Ouantity Each Per 10 Per 100

| than some other evergreens. | Quantity | Each  | Per 10 | Per 100 |

#### Jack. Pinus Banksiana, or P. divaricata.

There are two types of trees. One characterized by symmetrical outlines representing luxuriant growth under favorable conditions. The other one picturesque, showing irregular wind-blown, contorted outlines representing struggle with wind and poor soil. The Jack Pine typifies the latter. You can use it on the sand dunes and on dry hills. We can ship you carloads 6 to 12 feet high. They may be artistically arranged and practically the best thing. Other Pines suitable for salt spray and sand are the Japanese Black, Japanese Red, Pitch and Scotch.

Keep the roots moist. Puddle the roots. Dip them in a thick mud. Be sure it is not dirty water, but thick mud that coats the roots and keeps them from drying out

Planting a little Pine. Make the hole wide enough to spread out the roots. Cover with mellow earth and pack with the feet

#### PINE, Pitch. Pinus rigida.

The great Pine forests of New Jersey, Long Island and Cape Cod are mostly Pitch Pine, frequently swept by fire. The landscape is desolate and monotonous. Some people say they do not like the Pitch Pine. That is because they don't remember how appropriate it is where young trees have grown up with Birch, Cedar, Bayberry, Wild Roses and fire has not killed the branches. On the plains, sand dunes or sandy hills you can make beautiful groups with these trees.

|                            | Quantity | Each   | Per 10 | Per 100 |
|----------------------------|----------|--------|--------|---------|

| 5 ft. high                   | 50   | 6.00 | 50.00 |        |

#### Scotch. Pinus sylvestris.

Probably the most rapid-growing Pine. While it will not equal the White I'me as an old tree it will be satisfactory for 20 years. Foliage is a cheerful, bright green. Strong and sturdy in wind, drought, snow or cold. If you are trying to make a sheltered home site mix them in your boundary wall. If you have a hundred home sites to prepare, let us design for you some walls of green. We can make them inviting to prospective purchasers. We firmly believe that beautifully designed evergreen boundaries will do more to attract home builders than concrete curbs and Carolina Poplars along the front. With these Scotch Pines, 3 to 4 feet high, you can in 1½ years get a real windbreak and screen. They will jump upwards 2 feet a year.

During April we can supply trees without balls in 2, 3 and 4 ft. sizes at 33 per cent. discount. No orders for less than 10 trees will be accepted at this rate. "Trees will be accepted at this rate." Probably the most rapid-growing Pine. While it will not equal the White Pine

### In thinking of Hedges do not forget Pine

A Pine hedge is pruned this way, Nib back at dotted lines.

Time of year to trim is May and June while the growth is young.

White Pine. They make a wall of green around your lawn or garden, and give you all the pleasures of the country on a small area. You did not build your home in the country to see the busy street, or your neighbors buildings and activities. With a wall of green you have country sites all around you, the sun and the sky oner head. Walls of brick and stone surround many European gardens to give quiet, outdoor rooms for all the family. The same conditions are developing in the suburbs of American cities. Walls of green are cheaper than walls of brick and stone, and more because the machods for safely and economically more serviceable and more in accord with American ideals. We have been working for many years to grow walls of green and perfect the methods for safely and economically

#### PINE, White. Pinus Strobus.

You can plant no better evergreen. You would admire it at all stages of its growth. You can get it at all stages from little seedlings to picturesque trees 60 years old.

The most immediately serviceable trees are those 8 to 12 feet high because they are higher than the level of the eye. Now they are ready.

You can plan an irregular belt equivalent to two to four rows of trees. You can make a definite hedge and trim it. If the permanent height should be 8 or 15 feet high, you had best start to trim them as on page 19 so as to retain their lower branches. You will then be master of the situation when the trees will be glad to do all that they can for you.

Any time of the year you want these evergreens you can have them. We have developed methods equally successful all the year.

For the flower garden nothing can make a richer background than White Pine. For the laundry yard and service court White Pine will make just the right kind of a wall, and also give the right setting to the house.

One of our customers at Hewlett Bay had planted a grove of White Pines on the north side of the house. He is very emphatic that it has saved coal and kept his house more comfortable in the severe Winters of 1917 and 1918 than when the house was first built. We have been loath to make this claim, thinking best to rely on good design of heating apparatus, tight windows and well-constructed walls. Even if they don't save coal and add to the comfort in the house, they add to comfort out of doors and add to beauty. He says that his friends are delighted to find how quiet and secluded the place is surrounded by a wall of green, even though it is next to be the place is surrounded by a wall of green, even though it is next to be the place is surrounded by a wall of green, even though it is next to

This is the natural shape. It may be all right or it may grow too open or too tall or crowd and the lower branches die

You can keep it in the natural shape and increase the beauty and density by nipping back as shown on page 19

Wall of Green. Let us list up for you, people in your neighborhood who have walls of evergreens around their country home. You can then ask them how highly they value their evergreen boundaries. Then let us tell you how easily you can have an evergreen boundary to your country place. The idea of letting the public see every bit of your land is rapidly changing because of the increased travel and because country houses are closer together

PINUS. See Pine.

RETINOSPORA. See Cypress.

#### Colorado Blue. Picea pungens var. glauca.

These older trees 4 feet high have been recently transplanted wide apart and have excellent root systems. The eye delights in contrast. Blue Spruce makes a strong contrast with darker green of other evergreens and with the green of the lawn. At the end of a vista between Pines, Fir and Hemlock, the Blue Spruce is appropriate. For a Pinetum or a museum of evergreens these specimens are just right.

Pseudotsuga Douglasii. Douglas.

It is difficult to introduce a new name to the public, but take our word for it, this is a good tree. It has been tested for 30 years and no defects have appeared. It is native on the slopes of the Colorado Mountains and so it is accustomed to colder Winters and drier Summers than here.

Live Christmas trees of Douglas Spruce were sent out by us last year merely to

get you acquainted with a good tree.

To start a good hedge or grove try some of them at 3 feet high. If you want a few to make a tall, narrow wall of green try those 9 feet high. Remember these and all the evergreens are guaranteed to grow satisfactorily, or replaced free. We wouldn't guarantee them if we didn't know they were good.

| 2-4 in. high, 2 yr. seedlings \$35.00 per 1000 | 2500  | .06   | .50    | 4.00   |

#### YEW, Japanese. Taxus cuspidata.

The Japanese Yew will do for Eastern United States what the English Yew does for England. You may have thought it was not possible to reproduce the Yew hedges of England. It is.

The original Japanese Yew trees brought by Hall, the missionary, from Japan. are perfectly happy here. From their seeds we have grown this stock. Probably the biggest stock available, but we are sure it will not be enough. It is just now becoming known. Try some and be among the first to get acquainted with its merits. You can use them among your groves of evergreens, at the house foundation and for low hedges in the garden where they will be better than Boxwood. Rich, dark green and hardy. It has an added charm of translucent red berries.

|                                  | Quantity | Each   | Per 10 | Per 100 |

Japanese, flat. Taxus cuspidata.

We have named this flat because it grows 4 to 6 feet high and 10 feet wide, while the above species (Jap Yew) will grow up like Spruce or Fir with a single leader 12 feet high and 6 feet broad. It is just the thing for foundation planting, for edging down groups of tall evergreens, for garden hedges, for a low evergreen cover where you wish to look over. Come and see our block of them. It is beautiful as darkgreen velvet. It is the same as the above only it is grown from a side cutting and not from seed.

| 1 ft. wide, 1 ft. high   | 2000       | 2.00 | 15.00 | 130.00 |
|--------------------------|------------|------|-------|--------|
| 1½ ft. high. 1½ ft. wide | 4000       | 2.00 |       |        |
| 2 ft. high, 2 ft. wide   | <b>500</b> | 3.50 | 30.00 | 250.00 |

Japanese Dwarf. Taxus cuspidata var brevifolia.

Favorite with the landscape architects for a low foundation planting and gardens. It is low and will stay low. The original plants are only 2 feet high but they are 15

| 6-8 in. high, 4-8 in. spr | 275  | .60  | 5.00  | 45.00  |
|---------------------------|------|------|-------|--------|
| 6-12 in, high, 8 in. spr  | 3000 | 1.50 | 12.50 | 100.00 |
| 1-2 ft. high, 1½ ft. spr  | 50   | 5.00 | 40.00 |        |
| 2-2½ ft. high, 1½ ft. spr | 60   | 8.00 | 70.00 |        |

Spreading. Taxus baccata var. repandens.

This makes a little weeping mound of rich, dark green, just right to edge down foundation planting on north side of house. Particul arly likes to be in shady nooks. You could use it in the woods or under tall evergreens to round out the group. It will get 2 feet high and 4 feet broad.

| 8-12 in. high, 6-12 in. spr             | 1000 | 1.50 | 12.50 | 100.00 |
|---|------|------|-------|--------|
| 1-2 ft. high, $1\frac{1}{2}$ -2 ft. spr | 2500 | 4.00 | 30.00 | 250.00 |

Mulch. A thick covering of manure, sea weed, eel grass or similar litter, keeps the ground cool and moist. Your trees will show their appreciation by a more vigorous and beautiful growth. If you cannot mulch, cultivate. Don't let the soil become hard and baked. Keep it loose at least 4 inches deep

Your foundation can look neat and altractive or bare and unsightly. You can dress it up with shrubs. The little sketch may have a suggestion for you. If you prefer an evergreen effect, use Yews, Junipers, Rhododendrons, etc.

## $TO\ PLANT\ A\ PRIVET\ HEDGE$

Sketch a line, cut down accurately to have one side straight and plumb. Make the trench 8-15 inches deep and wide. Mix manure in the soil if available

To make the hedge thick at the bottom cut back to 4-12 inches. Trim two or three times a year. Hoe and cultivate and fertilize like a row of potatoes.

Van Houtte's. Spiræa Van Houttei.

Cover the roots with mellow earth. Pack it with the heel. Therefore, heeling in is the gardening name. If you can turn on the hose so much the better.

Doing this when you receive or unback your trees you can keep them for several weeks, even when the leaves start out in the Spring. You can keep them this way all Winter

2000

#### COVERING FOR A FEW HOURS

Protect the roots with straw, burlap, blanket or anything to keep off the sun and wind. Throw on water. Because a root looks dry and dusty it is not dead. Scratch the bark and see if it is not damp inside

The Viburnums are all handsome shrubs. They are attractive in flower and exceedingly showy in fruit; but, what is move important than either, their continuously healthy foliage is very handsome. If you want a bulk of foliage to serve as a wall of green to shut off the street or screen the kitchen, laundry yard or garage, make a liberal use of Viburnum

Are you a friend of the birds? They require food and shelter. We grow many berry-bearing trees and shrubs which provide food, and our energreens will give just the Winter shelter and nesting-sites they need. See our offerings on Viburuum, Cornus, Sumach, Barberry, Photinia. Elder, Black Alder, Holly, Bayberry, Spice Bush, Snowberry, Eleagnus, Magnolia, Bush Honeysuckle, Virginia Creeper, Hall's Honeysuckle, Juniper. We can make up a collection at \$10 per 100, of different berry-bearing plants in small sizes. Plant in tangled thickets and in large quantities.

Leucothoe. Excellent for planting in woodland and at the foundation of buildings on the north side

# RHODODENDRONS

Come and see them in bloom May 20th to June 5th and take them home in full bloom

These Rhododendrons have been growing here three to six years. Therefore they have big balls of roots, as illustrated bottom page 40, and will thrive for you.

They have been grown in the open, which has produced more flower buds, so you will get a big show of flowers this year.

Color enthusiasts can feel assured of harmonious sweeps of color by following these color descriptions.

See page 40 for soil requirements and care.

#### RHODODENDRONS AT THE FOUNDATION OF THE HOUSE

There is sure to be some place around the house where these plants will succeed. It may be a shaded corner where you have had difficulty in getting things to grow. Just the place for a bright clump of Rhododendrons. They will succeed on the sunny side just the same. It is merely a matter of decaying leaves and water. See sketch. It is best to plant 3 or 4 rows, spacing 2 to 13 feet apart. To cover the ground between the plants, use Pachysandra, which makes an evergreen cover 6 inches high.

#### OTHER USES

What to plant in the woods is a frequent question. Rhododendrons are often the best answer. The decaying leaves are there. The shade and wind protection are just right. Rhododendrons blend harmoniously with the Dogwood, Arrowwood, Oak and

 ${f Hickory}.$ 

In the Winter Rhododendrons enliven the scene which is otherwise monotonous. As the plants grow and commence to touch you can have the pleasure of extending the group, carrying the eye further back into the deeper shadows. Since the Chestnut bark disease has thinned out the forests the woods have lost some of their charm. This loss will soon be forgotten, if you guide the development of the Oaks and Hickories and transform them from poles to broad, park-like trees. In the sunny areas you can plant Rhododendrons, Pines, Hemlock and many shrubs. To add to Winter greenery you can have a carpet of Myrtle and Pachysandra. Climbing up the trees you can have Euonymus Radicans or Evergreen Bittersweet, English Ivy and Japanese Honeysuckle.

#### HOW TO PLANT AND CARE FOR RHODODENDRONS

All that Rhododendrons ask for is decaying leaves. You may remember a circular we sent out on "Winter Planting," mentioning Winter work your men could do,—rake leaves to add to the fertility of your soil.

leaves to add to the fertility of your soil.

Dig in leaves until your soil consists of about half leaves.

When you plant, pack the earth firmly around the balls and give them a good soaking with water.

Watering perhaps three or four times during the Summer will pay. The Rhododendrons will have a richer, darker color, and you will insure against losing any plants. It may not be practical to water out in the woods, but you should at least dig down and see if the ball of earth is getting dry during the first Summer.

Evergreen bittersweet or Evenymus radicans, var.vegetus. This has round, thick, leathery leaves about 1 inch in diameter. It will make a branchy little bush 2 feet high, or it will climb like a vine. Most effective for use in front of taller evergreens, or for planting at the base of the porch where a low-growing plant is required. Even when small, it bears heavy crops of showy red berries like those of the Bittersweet

Satisfy your hunger for Roses at Hicks Nurseries. Come all Summer and take the plants home in bloom.

This gives you opportunity to study the delicate shadings and get just what you want

# ROSES

## Hybrid Perpetual

Tausendschon. Pink.

Universal Favorite. Beautiful rose-pink. Wichuraiana. Pure white; single; fragrant.

## Hybrid Tea and Tea Roses

Potted plants \$1.00 each, \$7.50 per 10; \$60.00 per 100. Come and take tin bloom all summer. Not Potted, 75c. each, \$6.00 per 10, \$50.00 per 100. Come and take them

Admiral Ward. Flowers of velvety crimson shaded with purple. duction of vigorous growth. Very handsome.

Augustine Guinoisseau. This variety is especially valuable for cut flowers. The

white flowers are very fragrant and showy.

Betty. Golden yellow.

Chateau de Clos. Vougeot. A deep velvety crimson. This variety makes a strong growth and flowers freely.

Constance. (Hybrid Austrian Briar). A golden yellow rose of delightful fragrance. The buds are long and streaked with crimson. The foliage is of a shining green. A recent introduction; this is one of the finest yellows.

Duchess of Wellington. A very intense saffron yellow rose. Healthy, strong growing habit. Glossy green foliage.

Etoile de France. Bright red, fine.

Frau Karl Smid.

General MacArthur. A fine garden rose, deep rosy-crimson blossoms, very fragrant and free flowering. Gen. Superior Arnold Janssen. A new rose of rich carmine color. A vigorous

plant and very floriferous.

Geo. C. Wand. A lovely rose of orange vermillion. Few roses have a more beautiful coloring. A thrifty grower.

Gustav Grunerwald. A carmine pink rose with a yellow center and distinctly long-pointed buds. This is a fine healthy form.

Indiana. Deep crimson.

Jonkheer J. L. Mock. The finest of all pink Hybrid Teas. Described as Imperial pink. this is acknowledged as one of the best roses of recent introduction Joseph Hill. Large flowers of salmon pink, tinged with copper, very fragrant. A stocky plant flowering profusely.

Kaiserin Auguste Victoria. Cream-white.
Killarney White. Flesh pink, shaded white.
Konigin Carola. Large flowers of pale satiny rose. A thrifty variety flowering

Lady Alice Stanley. The flowers vary from light pink to a deep rose and are borne on long stiff stems. A very distinct rose.

Lady Ashtown. Deep pink blooms, large and full, very often on pendulous stems. Good variety.

Lady Greenall. Coppery orange.

Lady Hillingdon. Orznge yellow.

Laurent Carle. A deep lustrous red. This a remarkably showy rose with its large flowers and brilliant color.

Lieutenant Chaure. Velvety crimson flowers. An especially fine garden variety. Vigorous grower.

Lyon Rose. One of the showiest and most decorative varieties. Petal edges shrimp pink, center coral-red tinged with chrome-yellow at the base. flowers are large and full.

Mme. Abel Chatenay. A beautiful flower of carmine rose, tinted salmon; the petals have a silvery tinge. A very robust variety worthy of a place in every garden.
 Mme. Colette Martinet. Old gold, shaded orange yellow. The long golden buds

are unusually distinctive and are a marked contrast to the bronzed-green foliage.

Mme. Edouard Herriot. Known as the "Daily Mail Rose"; this rose is a prize winner. Coral red shaded with yellow and rosy scarlet; it presents one of the most charming of garden flowers.

Mme. Julez Bouche. A fine healthy variety. Salmon white shaded clear pink. A very meritorious variety for the garden.

Mme. Leon Paine. The combination of colors in this rose is remarkably beautiful. Silvery white with an orange yellow center and the reverse side of petals reddish

pink. A variety of strong growth.

Mme. Segond Weber. The large rosy salmon blossoms of this rose are markedly distinctive. Growth is strong and erect.

Mad. Jules Grolez. Light satiny rose. Free bloomer.

Maman Cochet. Carmine rose.

Marie Van Houtte. (Tea.) A rose of the Tea group, with white flowers tinted yellow shading to rosy tipped petals, pleasantly fragrant. Marquise de Ganay.

Miss Cynthia Forde. A fine rose of a deep showy rose pink.

Mrs. Aaron Ward. This rose is uniquely described as "Indian yellow, suffused with salmon." A wonderful variety, blooming freely and of vigorous habit.

Mrs. F. W. Vanderbilt. Flowers of a deep orange red shade. A very ornamental garden and bedding rose.

Mrs. Harold Brocklebank. A creamy-white rose with the base of the petals golden yellow. Very handsome form.

Mrs. Theodore Roosevelt. Another creamy-white rose but with a rose center. The buds are distinctly long-pointed. Good habit.

Although originated in 1912, this is still a most favored rose. A rosy pink shaded with salmon. Finely shaped blooms and vigorous habit.

**Pharisaer.** A free-flowering rose of lustrous rose color with a reddish pink center. Prince of Bulgaria. A very charming rose with flowers of silvery pink tinted with salmon. Blooms very large and well formed.

A rose of many colors, brilliant carmine, shaded salmon and coppery Radiance.

red. Healthy habit.

Souv. de Gustav Prat. A pure sulphur white rose, sometimes without the yellow shading, very floriferous and perpetual blooming.

Souv. de Pierre Notting. Tea. A very handsome rose, apricot yellow tinted

with orange. A fine healthy plant of strong growth.

Souv. de Pres. Carnot. Light rose and white.

Viscountess Folkestone. Light pink with a darket center. Large and fragrant flowers. An early bloomer and very free flowering.

R. Smith. Tea. Flowers of creamy-white flushed with bright rosy pink.

W. R. Smith.

Large and finely formed flowers.

owmere. (Rosa lutea hybrid). An Austrian rose hybrid. One of the most admired of new roses. Color a deep pink shaded yellow in the center and changing to carmine pink at the edges of petals. A very vigorous grower.

## Wild Roses

#### 25c. each, \$2.00 for 10, \$18.00 per 100

Rosa blanda. Meadow Rose. Pink.
Rosa Carolina. Swamp Rose. Pink; hips red.
Rlackberry Rose. White flowers. ra. Blackberry Rose. White flowers.
Northeastern Rose. Pink; foliage shiny. Rosa nitida. Sweet Briar. Single rose-pink flowers.

#### Dwarf Polyantha Hybrid Roses 75c. each, \$6.00 for 10, \$50.00 per 100

These varieties are of dwarf habit with smaller but very exquisite flowers. They make splendid edging plants and are particularly adapted to positions where low plants are needed. They require but little pruning.

Cecil Brunner. A light pink, double rose, with a yellowish center. Very fragrant.

A most charming buttonhole flower.

Clothilde Soupert. Flowers pure white, tinted silvery rose near the center and a pearly white toward the edge of outer petals. A profuse bloomer.

Jessie. Bright orange-red blossoms. This is one of the choicest roses of this class. A sturdy grower and very floriferous.

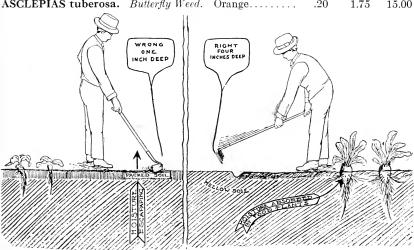

Maman Levavasseur. (Baby Dorothy Perkins). Large clusters of shell pink blossoms. A very persistent bloomer.

# HARDY GARDEN

We have several acres of vigorous, large plants. These will take less number per plants for a given area than the usual commercial size, but they may not be quite so easy to handle. We plant carefully and guarantee satisfactory delivery. If any plants are in an unsatisfactory condition when delivered, please notify us immediately and we will be glad to replace.

They have been carefully grown and accurately assorted as to color. If any

| plants prove unsatisfactory as to color, we would be glad to replace them.   |             |

Have you an area in your garden you are undecided how to treat? Fill it with Iris

Phlox. White flowers in abundance has become almost a doctrine with the owner of this garden. That is why it is attractive. If you visit there in Summer you find large masses of white Phlox which keep the garden brilliant six or eight of the most trying weeks of the season.

Phlox is another specialty. We are selecting the varieties with great care, reducing the list to a few of the best colors and best growers. We have a large area kept under the highest cultivation. Big, strong plants that will throw up several flower beeds.

flower heads.

Plants in large pots can be furnished throughout the Summer.

The best thing for filling vacancies as they occur in the garden.

Plant Grape vines this year, and eat Grapes next. The sketch shows how to prune, A separate branch is trained for each wire. The first wire can be three or more feet above the ground and additional wires 18 inches above. Six to eight buds are allowed to remain on each arm, which produce fruiting branches. These arms are to be removed entirely the following Winter and replaced by new fruiting canes which have grown from the main branch. Tie these canes to the wire, and cut back to six or eight buds

Newly planted Apple or Pear Trees should be pruned back to three or four branches, 8 inches long, disposed equally about the body of the tree, with several inches between. Each branch can be allowed to carry three subdivisions. The Spring following cut back the previous year's growth to I foot, allowing each subdivision to carry two branches instead of three. Keep the lops open so that the sunlight reaches all parts
